EXPERIENCE

AI Engineer Intern | AI Shipshape Ltd. | Remote (UK) *Jan 2026 – Jun 2026*

- Designed and built a production-grade AI-powered Resume Ranker system integrating a skill graph of 18,780+ skills sourced from Lightcast Open Skills, ESCO, and O*NET taxonomy.
- Engineered a real-time market demand scoring pipeline using Adzuna, Stack Overflow, and GitHub APIs with weighted aggregation (50/30/20) and TTL-based caching via APScheduler.
- Developed a modular Python package (skill graph generator) with automated refresh scheduling, live demand patching toolkit, and structured inspection utilities.
- Built a JD (Job Description) parsing component using Gemini 2.5 Flash for structured skill and requirement extraction from unstructured job postings.
- Resolved critical data quality issues (96.5% placeholder demand values) through targeted patch scripts and a validated scoring pipeline.

Web Developer Intern | ISHAN NETSOL PVT LTD. | Gurgaon, Haryana *May 2023 – Jul 2023*

- Developed and customized web applications and modules for client project using Joomla and ODOO CMS platforms.
- Authored and published technical articles for the company's official blog, improving developer documentation and knowledge sharing.

EDUCATION

JK Lakshmipat University – Jaipur, Rajasthan *Convocation: November 2026*
Bachelor of Technology in Computer Science Engineering

Pinegrove College – Hyderabad, Telangana *2021*
Intermediate (Class XI & XII)

Little Scholars School – Mahbubnagar, Telangana *2019*
High School (Class X)

PROJECTS

AI-powered Resume Ranker | *python, Gemini 2.5 Flash, Adzuna API, Stack Overflow API, GitHub API, APScheduler*

- Built end-to-end pipeline integrating an 18,780-skill graph with live market demand scoring; reduced placeholder values from 96.5% to near-zero through automated patch scripts.
- Designed modular architecture with TTL caching, real-time API aggregation, and JD parsing for scalable talent-matching in production environments.

Maritime Resume Ranker | *python, Hugging Face, Transformers, all-MiniLM-L6-v2, Sentence Transformers, Cosine Similarity*

- Fine-tuned all-MiniLM-L6-v2 model (Hugging Face) on a corpus of 5,000 resumes to generate domain-aware semantic embeddings that capture contextual meaning beyond keyword matching.
- Implemented cosine similarity scoring to rank resumes against job description; served as the proof-of-concept embedding pipeline for the production-grade AI Resume Ranker system.

AI-Powered Meal Plan Generator | *Python, Gradio, Google Generative AI, LangChain*

- Developed an AI application generating multi-day personalised meal plans based on user inputs (Calories, diet, preferences, etc.).
- Implemented consolidated ingredients lists, shopping lists with cost estimates (INR), and daily nutritional summaries.

Space Rental App (Android) | *Kotlin, Android Studio, Firebase Auth, Firebase Realtime DB*

- Co-developed a native Android app enabling users to browse, book, and manage event spaces with real-time data sync via Firebase.

Pavitram Food – E-Commerce Website | *Shopify, Google AI Studio*

- Built and deployed a production e-commerce store (pavitramfood.com) for an organic food startup with custom Shopify templates for brand-specific UX.

Simulating Wireless Sensor Networks | *NS3 Network Simulator*

- Co-developed a WSN simulation configuring Wi-Fi nodes, point-to-point links, and CSMA nodes to analyse network behaviour and packet flow.

Autonomous Vehicle Simulation | *Python, Pygame, Pathfinding Algorithms*

- Built a 2D autonomous vehicle simulation with real-time controls, sprite handling, and collision detection to model realistic driving behaviour.

Real-time Combat Helmet (RTCH) prototype | *TensorFlow Lite, Arduino IDE, ESP8266*

- Prototyped a wearable system integrating thermal/night-vision sensors and an ESP8266 microcontroller into a 3D-printed helmet for on-device object/facial recognition.

Tour Guide Robot Simulation | *CoppeliaSim (V-REP), Onshape*

- Designed and simulated a tour guide robot with camera, vision, and proximity sensors for autonomous navigation and obstacle avoidance on a virtual campus.

CERTIFICATIONS

- **Google Cybersecurity Professional Certificate –** Coursera (Google)
- **Data Structures –** Coursera (UC San Diego)
- **Blockchain Basics & Smart Contracts –** Coursera (University at Buffalo / SUNY)
- **Introduction to Data Science –** Cisco Networking Academy
- **Tata Cybersecurity Security Analyst Job Simulation –** Forage | Focus: IAM, security best practices & strategic planning

TECHNICAL SKILLS

Languages: Python, Java, Kotlin, C++, SQL, HTML/CSS
AI & ML: LLMs (Google Generative AI, LangChain, Gemini), Hugging Face Transformers, Sentence Transformers, TensorFlow Lite, Gradio, APScheduler
External API Integrations: Adzuna API, Stack Overflow API, GitHub API, REST APIs, JSON, TTL Caching
Web & Mobile: Firebase (Realtime DB, Auth), Shopify, Joomla, ODOO CMS
Hardware & IoT: ESP8266 NodeMCU, ESP32, Arduino IDE, Sensor Integration
Simulation & Design: NS3, CoppeliaSim (V-REP), Onshape
Tools: Git, VS Code, Google AI Studio, Android Studio, Claude Code, Codex
